#### **DETAILED ACTION**

The following is an examiner's statement of reasons for allowance: The prior art does not anticipate nor render obvious the combination set forth in the independent claim, and specifically does not disclose that "a box-shaped casing having larger horizontal dimensions than its vertical dimension, and internally having an air passageway in which the heat exchangers are disposed side by side in a horizontal plane" and "an operation in which air having passed through the first heat exchanger flows into the air supplying side space, and air having passed through the second heat exchanger flows into the air exhausting side space, and an operation in which air having passed through the second heat exchanger flows into the air supplying side space, and air having passed through the first heat exchanger flows into the air exhausting side space are alternately performed" as recited in independent claim 1.

The closest prior art of record, Harushige (JP Pub. No. 2003314856) and Jones (US Patent No. 2,526, 874) disclose all the limitations required by the independent claims, including a humidity control system with a refrigerant circuit, first and second adsorbent-supported heat exchangers, box-shaped casing internally having space for air to pass through and for disposing heat exchangers, a switching mechanism, a first space and second space where supply and exhaust fan are disposed in the first space and the first and second heat exchanger and switching mechanism are disposed in the second space, and a compressor disposed in the space of the air passageway, but not a box-shaped casing having the heat exchangers in a side by side manner and does not

disclose an airflow pattern to cross planes between the heat exchangers. Although it is well known in the art to have a humidity control system with heat exchangers arranged in one on top of each other and a separate airflow pattern for each heat exchanger, there is no teaching in the prior art of record that would, reasonably and absent impermissible hindsight, motivate one of ordinary skill in the art to modify the teachings of the prior art so that the humidity control system heat exchanger arrangement is side by side and an airflow pattern flows in numerous directions and flow patterns. Thus, for at least the foregoing reasons, the prior art of record neither anticipates nor rendered obvious the present invention as set forth in claim 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
